Priority: Normal  
Subject: CAPS

I ~~approve~~ of the Computer-Aided Passenger Screening proposal. While a fan of civil liberties, I place a high value on not sharing flights with terrorists or bombs. I believe that proper oversight should be instituted to protect against abuse in sampling and inspection. But as a former statistician, I have faith that the odds of mass murder may be lowered via statistical prediction, and would like to see this technology employed to lengthen my expected lifespan.

Thank you.
